SURFACE TEXTURE

HIGH-GLOSS (HG)

Extravagant mirror effect.
Striking appearance
possibilities for vertical
applications.

TOP VELVET (VV)

Elegant matt, smooth
fine texture, sensitively
designed.

SEMI MATT (SM)

This surface texture is
convincing for its pleasantly
soft, natural feel.

PRIZE-WINNING

A prize-winning product

Nine attractive shades open up much greater freedom for the individual in interior design. This is highly appreciated by architects and interior designers:

In 2008, HPL Solid Color received the coveted "Innovation prize for architecture + Office XXL", and in 2009 the "interzum award: intelligent material & design".

HPL-SOLID COLOR

Seamless, brilliant appearance thanks to Duropal HPL Solid Color with dyed, colored core material.

The idea: Dyed through to the core

The dyed core of HPL SolidColor makes it possible to build shelves, worktops and furniture fronts without any visible butt edges and joints. This high-quality material also allows for surfaces with a painted appearance, depending on the choice of the surface texture.

Homogenous material for universal use

This dyed laminate developed using special techniques demonstrates perfect working properties.

Its application as a surface or edge material extends from kitchen fronts to cabinet doors, shelves, wall paneling and worktops and free-standing cabinets. Elements with beveled edges benefit particularly from the homogeneity of the material.

Highly resistant and durable

The quality is demonstrated not only by the unique appearance: HPL Solid-Color also stands out for its highly-resistant surface, ensuring many years of enjoyment of your new interior design.

DUOPAL HPL-SOLID COLOR IS AVAILABLE IN THE
HPL SIZE 4,100 X 1,300 X 1.2 MM AS A COMPOSITE OR
FURNITURE ELEMENT (WITHOUT POST-FORMING).
